Profile

Full Stack AI Engineer with an Engineering degree in Computer Science and hands-on experience developing AI, machine learning, backend and full-stack applications. Strong proficiency in **Python**, with experience in **PyTorch, TensorFlow, FastAPI, Flask, LangChain, CrewAI, React** and cloud/DevOps technologies. Experienced in building data-driven solutions, AI-powered applications, automated pipelines and production-oriented software, with a strong focus on software quality, performance and business impact.

Technical Skills

Programming	**Python**, JavaScript, TypeScript, PHP, Java, SQL, C/C++, C#
AI & Machine Learning	**PyTorch**, **TensorFlow**, Scikit-learn, Computer Vision, Deep Learning, NLP, LLM Applications, RAG, YOLOv8, VGG16
AI Agents & LLM	**LangChain**, **CrewAI**, LLaMA 3, RAG, ChromaDB, Prompt Engineering
Backend & APIs	**FastAPI**, **Flask**, Django, Spring Boot, ASP.NET, REST APIs, Microservices
Frontend	**React.js**, Next.js, Vue.js, Angular, JavaScript, TypeScript, HTML5, CSS3
Data & Databases	PostgreSQL, MySQL, MariaDB, MongoDB, SQL Server, Data Processing, ETL
MLOps & Automation	**Airflow**, **MLflow**, **DVC**, Automated Pipelines, CI/CD, GitLab, Docker
Cloud & DevOps	**AWS**, Docker, Git, GitLab CI/CD, Linux, Nginx, ELK Stack
Data Engineering	Spark, Hadoop, Talend, Data Pipelines, Power BI

Professional Skills

Analytical Thinking, Problem Solving, Business-Oriented Mindset, Software Engineering Best Practices, Teamwork, Autonomy, Technical Curiosity, Learning Agility, Agile Methodologies, Clear Communication

Languages

French (Fluent), English (Intermediate), Arabic (Native)

Professional Experience

January 2025 – Present

Full Stack Engineer, Orange Business, Morocco

- Design and develop business-oriented web applications using **Python, PHP, JavaScript** and SQL, contributing to both backend and frontend components.
- Develop and maintain reusable backend services and APIs while applying software engineering best practices for reliability, maintainability and scalability.
- Optimize **SQL/MariaDB** queries and application processing, contributing to an estimated **30% reduction in ticket processing time**.
- Develop an internal **AI-powered chatbot** to automate recurring support requests related to authentication and access management.
- Implement authentication, role-based access control and permission management, with a strong focus on application and data security.
- Contribute to application architecture decisions, performance optimization and continuous improvement of the platform.
- Use **Git/GitLab, Docker and CI/CD** workflows for source control, collaborative development and application delivery.
- Participate in code reviews and technical discussions while collaborating with technical and business teams in an Agile environment.
- Produce technical documentation to support knowledge sharing, maintainability and long-term evolution of the applications.

Python | PHP | JavaScript | SQL | MariaDB | GitLab | Docker | CI/CD | Linux

October 2024 – January 2025

Software Engineer / AI Intern, Artéka, Amiens, France (Remote)

- Developed **FastAPI** services to expose computer vision capabilities through production-oriented REST APIs.
- Contributed to an AI solution for **player re-identification** using computer vision techniques.
- Implemented a real-time data streaming pipeline using **Apache Kafka**.
- Developed a backend service for generating and processing statistical data.
- Implemented **CI/CD** workflows and deployed services on **AWS**.
- Collaborated in an Agile environment using Jira and contributed to the development of reliable and maintainable software components.

Python | FastAPI | Computer Vision | Kafka | AWS | CI/CD

February 2024 – October 2024

PFE Intern – Backend / AI Engineer, Orange Business, Salé, Morocco

- Developed **Python** automation scripts for VoIP invoice validation and data processing.
- Designed and developed REST APIs using **Flask** for backend services.
- Contributed to an **MLOps pipeline** for customer detection using **Airflow, MLflow and DVC**.
- Implemented monitoring and observability mechanisms using the **ELK Stack**.
- Containerized application services using **Docker** to facilitate deployment and reproducibility.
- Worked with **MongoDB** for data storage and processing.

Python | Flask | Airflow | MLflow | DVC | Docker | MongoDB | ELK

Education

2019 – 2024 Engineering Degree (Master's equivalent) – Computer Science, ENSA Kénitra, Morocco

AI & Software Projects

Intelligent Medical Assistant 2024

AI / LLM Project – Dell Technologies Competition

Development of an intelligent medical assistant combining LLaMA 3, Retrieval-Augmented Generation and computer vision. Implemented an AI pipeline integrating document retrieval, language models and image analysis.

LLaMA 3 | LangChain | RAG | ChromaDB | PyTorch | YOLOv8 | Flask | Next.js | MongoDB

Student Records Management Platform 2025 – 2026

Full Stack / Automation Project

Development of a web platform managing the complete lifecycle of student records, including automated scheduled processing, document exchange through SFTP and notification workflows.

Python | Flask | React | PostgreSQL | Docker | Nginx | MinIO | Linux

Predictive Maintenance for Industrial Equipment 2023

AI / Machine Learning Project – OCP

Development of a predictive maintenance solution for stacker machines using infrared thermal data and vibration signals, with a machine learning model exposed through an API and an interactive interface.

TensorFlow | Python | FastAPI | Streamlit | Computer Vision | Machine Learning

Emotion Detection Application 2023

Deep Learning Project

Development of an emotion recognition application using deep learning and computer vision techniques for image-based emotion classification.

TensorFlow | Keras | VGG16 | OpenCV | Python | Tkinter

Full Stack Marketplace Application 2023

Software Engineering Project

Development of a marketplace web application with backend services, database management and a responsive user interface.

Ruby on Rails | MySQL | TailwindCSS

Additional Experience

June 2023 – August 2023

AI / Machine Learning Intern, OCP, Morocco

- Developed a predictive maintenance model using industrial sensor data, including infrared thermal images and vibration signals.
- Built an API and interactive interface to expose machine learning predictions.

Python | TensorFlow | FastAPI | Streamlit

June 2022 – August 2022

Data Science Intern, Telecom Industry, Morocco

- Developed sales forecasting models for SIM cards, dealers and scratch cards across three Moroccan telecom operators.
- Performed data analysis and visualization using Python, Scikit-learn, R and Power BI.

Python | Scikit-learn | R | Power BI
